

# Standard Numeric Format

يستخدم لتنسيق عرض الرقم بالصيغة المناسبة بدون التغير فيه سواء كانت

- Currency – C
- Fixed-point – F
- Percent-P
- Decimal-D
- Exponential-E

## 1. why the output of this Equation = \$30.00?

Because you use :c this Standard Numeric Format turn on the num to Currency

## 2. what is its benefit?

It makes the number appear to the user in an organized, clear, and professional way without changing his value

## 3. try another example with a different specifier with a screenshot of the output.

- Fixed-point – F

```
int x=10;  
int y=10;  
Console.WriteLine($"Result: {(x + y):F2}");
```

Microsoft Visual Studio Debug Console

Result: 20.00
